

Pricing — Anchored to ROI, Replicable from Goodlettsville to Shelby County

Civvix Inc.

September 2026

The unit of value

A situs correction is not a lead. Wilson County and its school department booked \$61.8M in local option sales tax last year across roughly 3,600 named businesses — about \$17,000 per business, heavily skewed toward retail and fuel. One cross-county correction therefore moves **on the order of \$17,000 a year, every year, forever**, plus one year back. A single grocery or truck stop is \$50–150K a year. Civvix's TPP lead is priced at \$10 because a lead is worth a few hundred to a few thousand dollars of assessment, once. A packet-ready situs correction is worth fifty to a hundred times that, recurring. The price should say so.

What the market charges

Vendor / model	Fee	On \$500K recovered
HdL (California)	15% of recovery, eight quarters	\$75,000
MuniServices → Neumo (Texas)	30% contingency, eight quarters	\$150,000
Azavar (Illinois)	up to 50% contingency	\$250,000
Knox County RFP #2969 (Tennessee, 2020)	fixed, all-inclusive, no contingency	unknown

The structure — three parts, each tied to a number the client already has

Part A — Monitoring: basis points on prior-year local option collections, tiered

The base is the jurisdiction's own audited local option sales tax revenue (county plus school department for a county; the city's own line for a city). No argument about the number, and it scales with exactly what is at risk.

Prior-year local option collections	Rate
first \$25M	15 bps (0.15%)
\$25M – \$100M	10 bps
\$100M – \$500M	5 bps
above \$500M	2.5 bps
floor	\$7,500

Jurisdiction	Base (est. where marked)	Annual monitoring	Protected value / yr*	ROI
Goodlettsville (city)	~\$5M	\$7,500 (floor)	\$25–75K	3–10×
Mt. Juliet (city)	~\$20M	\$30,000	\$100–300K	3–10×
Lebanon (city)	~\$26M	\$38,500	\$130–390K	3–10×
Wilson County + schools	\$61.8M	\$74,300	\$310–925K	4–12×
Sumner County + schools	~\$80M	\$92,500	\$400K–1.2M	4–13×
Rutherford County + schools	~\$150M	\$87,500	\$750K–2.2M	9–25×
Knox County + schools	~\$200M	\$112,500	\$1.0–3.0M	9–27×
Shelby County + schools	~\$250M	\$137,500	\$1.2–3.7M	9–27×
Davidson / Metro	~\$450M	\$237,500	\$2.2–6.7M	9–28×

*0.5–1.5% of base — the range in the strategy memo, consistent with the Hendersonville calibration. Bases marked ~ are estimates to be replaced with each jurisdiction’s audited figure.

Monitoring includes: quarterly re-measurement of every rooftop against refreshed boundaries; the roster join and adjudicated queue after each situs-report pull; both-directions reporting; the quarterly bulletin; the calibration report; and the guarantee that nothing stays wrong for more than the Department’s one-year correction window. **The insurance framing is the right one:** a few basis points on the protected base, in exchange for never losing a year.

Part B — Reconciliation: \$500 per adjudicated, packet-ready finding

The per-lead model, priced to what the unit is worth. Non-contingent and work-based: the county decides what to submit and pays for the packet, not the outcome. Either direction. A first roster in a county Wilson’s size will likely produce 100–200 findings — \$50–100K, once, against a year of back money on every one.

Offer the contingency alternative in the same proposal — **12% of documented recovery for eight quarters**, cheaper than HdL’s 15% — and let procurement choose. Some jurisdictions can only buy “free.” Never both on the same finding.

Part C — Annual business-license and TPP check: \$10 per verified lead, unchanged

The existing Civvix product, run once a year against the same placed universe, bundled into the engagement letter so it never needs its own procurement.

What Wilson County pays and gets

	Year 1	Steady state
Monitoring (A)	\$74,300	\$74,300
Reconciliation (B), ~150 findings	~\$75,000	~\$10–20K (new errors: annexations, new registrations)
Total	~\$150K	~\$85–95K
Recovered + protected value	\$500–900K	\$300K+ protected, growing
ROI	4–6×	3.5–4× and compounding

This clears the county bid threshold, which is intended: the RFP becomes the template other counties copy, and Civix is the only vendor that wrote a proposal against it.

What it does statewide

Tennessee's local option sales tax runs roughly \$3B a year across counties and cities. With the tiering, counties alone come to about **\$3.5M a year at full penetration**, cities another **\$2M**, before a dollar of reconciliation or TPP work. At a realistic 35% of the state by year three: **~\$2M recurring plus findings**, on infrastructure that costs under \$500 a month, because the surface is statewide and a jurisdiction is a config file.

Rules that travel with the structure

- **No contingency on monitoring, ever.** The fee is the fee; the jurisdiction keeps 100% of what comes back. This is the sentence that beats every competitor and neutralizes the predatory-vendor objection before it is raised.
- **County-and-cities package.** When a county signs, each city inside it monitors at 75% of its formula fee. It puts both sides of every intra-county seam inside one client family, which is how the bidirectional-findings problem stops being awkward and becomes a feature.
- **Multi-year price lock**, annual renewal, so a five-year relationship never trips an aggregation rule the county did not plan for.
- **Multi-county cities** (Goodlettsville, Portland, White House, Millersville, Ridgetop) are priced on their whole base and served from both county surfaces.

The pitch in one paragraph

Every year, sales tax that belongs to you is being sent somewhere else because someone wrote a mailing address on a form fifteen years ago, and the State never checks. We already know where those errors are on your map — you can look right now, free. For a few basis points on the revenue we protect, we compare the State's list to the map every quarter, hand you the correction letters ready to sign, and guarantee nothing is ever missed for more than the one-year window the Department allows. We take no share of what comes back.
