

# Three Revenue Lines. One Placed Universe.

Business license, tangible personal property, and — the piece you asked for on Friday — **sales-tax situs**. Every Wilson County business placed on its rooftop, checked against three obligations, delivered as finished work to three offices.

**13,512**

Wilson businesses placed on a rooftop  
from public data

**6,723**

active entities with no TPP schedule on  
file

**537**

named businesses carrying another  
county's mailing city

**\$61.8M**

local option sales tax at stake every year

# Two Gaps. Both Structural. Neither Is an Oversight.

Friday's premise still holds: businesses that never file never enter any government system. The situs gap is the mirror image — businesses that did register, coded to the wrong jurisdiction by a mailing address written on a form years ago. The State never checks either one.

## TPP • BUSINESS LICENSE

### The business that never entered the roll

9,863 active for-profit entities hold a Wilson County address on the State register. 3,140 filed a TPP schedule in 2025. The other 6,723 — 68% — are outside the Assessor's roll and, after the statutory exemption screen, 7,360 carry a business-license obligation.

Surfacing them means reaching outside government data, into the sources no assessment system is built to hold. That was Friday.

## SALES TAX SITUS • THE NEW PIECE

### The business the State sends to the wrong county

Every sales-tax dollar in Tennessee is split 50/50 by situs code — half to the county and school system, half to the city or county where the sale happened (\$ 67-6-712). The code comes from the registration form, and the form carries a postal city. Old Hickory is a Nashville post office that delivers deep into Wilson County.

5,538 Wilson rooftops carry another county's mailing city. 537 of them are named businesses. When the code is wrong, Wilson loses both halves — and the Department only corrects one year back.

# The Tax Base the County Never Recorded

The TPP and business-license screening, unchanged. One screening closes two obligations; the Assessor keeps every determination (§ 67-5-507(a)); flat fee is the only lawful structure (§ 67-5-507(c)).

6,723

businesses registered and active with the Tennessee Secretary of State at a Wilson County address, with no tangible-personal-property schedule on file with the Assessor.

68% of the TPP-obligated universe

9,863

Active for-profit entities on the state register, Wilson address (Aug 2026)

3,140

TPP schedules actually filed in 2025 (TN Comptroller)

31.8%

Wilson's TPP filed-compliance rate

+1,724

Net new entities per year — the gap widens on its own

7,360

Entities carrying the business-license obligation after the exemption screen

\$2.1–3.9M

First-cycle TPP recovery, county rate only (6–11% of county average, 1.8-year look-back)

# Wilson County, Measured to the Foot

The Wilson County workbench — every rooftop placed inside the Department's own situs polygons, seams drawn, businesses ranked by exposure. Live at [atlas.navigationholdings.com](https://atlas.navigationholdings.com). No confidential data was used to build it.

88,196  
rooftops placed in a DOR situs polygon — zero unplaced

141 miles  
of county seam — Davidson, Sumner, Rutherford, Trousdale, Smith, Cannon, DeKalb

5,538  
Wilson rooftops carrying another county's mailing city (Old Hickory, Hermitage, Lascassas...)

537  
named businesses on those rooftops — both halves of the tax at risk

12,697  
addresses where the State's own address file and its own polygon disagree — errors that run in Wilson's favour, reported the same way

# Geography First. Taxpayer Data Last.

Before anyone tells the Department a business is miscoded, the geography underneath the claim should be provable. So the map is built first, from public layers, and the confidential situs report is the last thing touched — inside your own browser.

**Zero custody.** The situs report is disclosed to a contractor under § 67-1-1704(d) and protected by § 67-1-1709. It stays in the County's session; Civvix holds public data only. That is the sentence that makes this contract small on insurance, small on liability, and easy to approve.

# One Placed Universe. Three Obligations. Three Offices.

The same rooftop that answers "which situs code?" answers "is it licensed?" and "did it file a schedule?" That is why the three belong in one program, and why the second and third cost a fraction of the first.

12+ PUBLIC SOURCES

Data in

County Clerk

Verified unlicensed businesses, county and city obligation

Value out: recovered and protected revenue, routed to the office that owns the decision. Civvix delivers evidence, never determinations.

# Three Streams, One First Cycle

Friday's TPP scenarios, unchanged, plus the situs stream Aaron asked about. County rate only; the Lebanon, Mt. Juliet and Watertown rates levied on the same equipment are on top.

| Revenue stream                      | Basis                                                                                                                                                                               | First cycle               | Recurring / year                             |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|----------------------------------------------|
| Tangible personal property (Friday) | 6,723 non-filers × \$2,197 county tax per return × 6–11% size factor × 85% collection; 1.8-year look-back                                                                           | \$2,110,000 – \$3,868,000 | \$753,000 – \$1,381,000                      |
| Sales tax situs (new)               | ~165 miscoded registrations (537 flagged × 0.31 precision from the Hendersonville calibration) × \$5,700 local option each (⅓ of county mean), 50–100% verified, plus one year back | \$940,000 – \$1,880,000   | \$470,000 – \$940,000 protected, compounding |
| Business license                    | 7,360 obligated entities; \$15 minimal / standard fees, three back years, 15% penalty — unmodelled upside on Friday                                                                 | \$30,000 – \$60,000       | \$10,000 – \$20,000                          |
| Total                               |                                                                                                                                                                                     | \$3.1M – \$5.8M           | \$1.2M – \$2.3M                              |

## Situs is the stream that never stops

A corrected code moves that business's tax every year, forever. Corrections found late are money the Department will not return.

## Both directions, on purpose

12,697 addresses run the other way. Reporting them is what makes the findings survive a challenge from Lebanon or Mt. Juliet.

## Calibrated, not assumed

6–11% is sampled from forced TPP accounts; the 0.31 situs precision from a city roster with situs codes (n = 1,945). The first Wilson roster replaces both with measured rates.

# Year One: \$3.1M Conservative, \$4.4M Expected, \$5.8M Upside

Every line below is a measured population times a sampled rate. Nothing is a statewide average. Where a rate is an assumption, the slide says so and names the sample that would replace it.

| Stream                      | Population (measured)                                                                                                                      | Rate and value (sampled / sourced)                                                                                                                                                                                          | Conservative    | Expected        | Upside          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------|-----------------|
| TPP forced assessments      | 6,723 active for-profit entities with no schedule — SOS register screened against Wilson's own TPP file (n = 9,863)                        | \$2,197 county tax per return (Comptroller, Wilson) × 6 / 8 / 11% size factor (sampled from forced and discovered accounts) × 85% collection × 1.8-yr look-back (measured, Wilson)                                          | \$2,110,000     | \$2,813,000     | \$3,868,000     |
| Sales-tax situs corrections | 537 named businesses on Wilson rooftops with another county's mailing city; 540 more within 250 ft of a seam (measured on 88,196 rooftops) | Precision 0.31 on exposure flags (Hendersonville roster calibration, n = 1,945 coded registrations) → ~165 miscoded; \$5,700 local option per business (⅓ of the \$17K county mean); 50 / 80 / 100% verified; + 1 year back | \$940,000       | \$1,500,000     | \$1,880,000     |
| Business license            | 7,360 entities carrying the obligation after the 25.38% exemption screen (Wilson's own file)                                               | \$15 minimal / standard fee, three back years (§ 67-1-1005), 15% penalty; 40 / 55 / 70% unlicensed among non-filers (Civvix ROI model default 70% valid)                                                                    | \$30,000        | \$45,000        | \$60,000        |
| First-year total            |                                                                                                                                            |                                                                                                                                                                                                                             | \$3.08M         | \$4.36M         | \$5.81M         |
| Program cost, year one      |                                                                                                                                            |                                                                                                                                                                                                                             | \$284,000       | \$284,000       | \$284,000       |
| Net to the County • return  |                                                                                                                                            |                                                                                                                                                                                                                             | \$2.80M • 10.8× | \$4.08M • 15.4× | \$5.53M • 20.5× |

**Friday's proposal:** \$24,000 for ~\$650,000 — one screen, one office, one pass.

**The increment:** +\$260,000 of fee buys +\$2.4M to +\$5.2M of first-year recovery — 9× to 20× on the added dollar.

**What replaces the assumptions:** the first Wilson roster (situs precision) and the first 50 closed TPP cases (size factor). Both are in the program.

# What the Same Three Answers Cost, Bought Separately

Expected-case first year on Wilson's measured populations. Standalone rows are priced the way those services are actually sold; the gross recovery is held equal so the only variable is what the County keeps.

| Option                                | How it is sold                                                                                                                                                                                                               | Cost to Wilson                            | Gross recovery | County keeps     | What is missing                                                         |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|----------------|------------------|-------------------------------------------------------------------------|
| Standalone sales-tax situs audit      | Contingency: HdL 15%, MuniServices/Neumo 30%, Azavar to 50% of recovery, eight quarters                                                                                                                                      | \$225K – \$750K (30%: \$450K)             | \$1,500,000    | \$750K – \$1.28M | One direction only; no rooftop placement; ends after eight quarters     |
| Standalone TPP audit                  | 30% of new revenue is the market form (TMA, New London CT: \$278,700 on \$1.8M) — void in Tennessee, § 67-5-507(c). The lawful form is a per-account audit fee (\$300–700) that audits filers, not the 6,723 who never filed | \$844K at 30% (or \$2.0–4.7M per-account) | \$2,813,000    | \$1.97M          | Never-filer discovery; a lawful TN price; the license side              |
| Standalone business-license discovery | Contingency 30–50% of fees collected, usually with a minimum; city and county sold separately                                                                                                                                | \$14K – \$23K + minimum                   | \$45,000       | \$22K – \$31K    | The TPP schedule the same business skipped; nothing on situs            |
| Three vendors, three contracts        | Three procurements, three data requests, three offices fed separately                                                                                                                                                        | ≈ \$1.31M                                 | \$4,358,000    | ≈ \$3.05M        | No shared map — a business one vendor finds never reaches the other two |
| Civvix Revenue Integrity Program      | Flat fee per resident + per-unit work product; no contingency; quarterly; three offices                                                                                                                                      | \$284,000                                 | \$4,358,000    | \$4.07M          | Nothing; year two ≈ \$207K against \$1.1–2.3M                           |

Sources: vendor contingency rates from public contracts and RFP responses (HdL, MuniServices/Neumo, Azavar; Tax Management Associates' New London, CT contract at 30%); Tennessee prohibition on percentage-of-recovery for assessment work, T.C.A. § 67-5-507(c). Gross recovery per the ROI slide, expected case.

# From a Lead Price to a Program Price

\$24,000 a year bought one screening for one office. The program is three revenue lines for three offices, monitored continuously, priced per resident — and the County keeps 100% of every dollar.

WHERE WE STARTED

\$24,000 / yr

\$10 per lead, TPP and license only, one office, one pass. Anticipated recovery ≈ \$650,000.

THE PROGRAM

\$188,781 / yr

\$1.08 per Wilson resident. Situs + TPP + license, quarterly, all three offices. Plus work product as produced: \$500 per situs packet, \$10 per verified lead.

|                                       | Year 1          | Year 2+         |
|---------------------------------------|-----------------|-----------------|
| Program fee (per resident)            | \$188,781       | \$188,781       |
| Situs packets (~150, then ~25/yr)     | \$75,000        | \$12,500        |
| Verified leads (~2,000, then ~600/yr) | \$20,000        | \$6,000         |
| County pays                           | ≈ \$284,000     | ≈ \$207,000     |
| County recovers / protects            | \$3.1M – \$5.8M | \$1.1M – \$2.3M |
| Return on the fee                     | 11× – 20×       | 5× – 11×        |

Continuous, not once

+1,724 new entities a year and a one-year DOR window: a single pass leaves money on the table every quarter.

Flat fee is the law on TPP

§ 67-5-507(c) voids percentage-of-recovery for assessment work; the fee has to carry the work. It still beats any contingency.

What contingency would cost

HdL 15%, Neumo 30%, Azavar up to 50%: on the situs stream alone that is \$93K–\$925K a year, taken off the top, forever.

Multi-year term, price fixed to the Census estimate on the contract date. No contingency on monitoring, ever.

# The Whole State Is Already on the Map

Every Tennessee county's rooftops — 3.94 million — placed in the Department's situs polygons and cross-checked against the Comptroller's city limits and the 911 authorities, with 360,839 businesses from a deduplicated statewide register. Shaded by cross-county-postal businesses per 1,000; Wilson's neighbours are on the other side of the same seams.

Why this matters to Wilson: the Lebanon Road / Old Hickory corridor is simultaneously a finding about Davidson County's coding. The seam has two sides, and both are already measured. A county that signs first sets the template the others follow.

95 / 95

counties run, zero failures

18,246 mi

of jurisdictional seams measured

\$0

spent on data — every layer public

# A Competitive Solicitation, Written to a Standard of Proof

Not a sole source. The County describes the outcome and the evidence standard; any firm may bid. Every requirement exists because a finding that fails it does not survive a challenge from a city or a taxpayer.

**Rooftop placement**

911-authority address points only; placement distance and unplaced share reported.

**Authoritative boundaries**

DOR polygons cross-checked against Comptroller city limits and the 911 jurisdiction attribute; distance to seam on every finding.

**State-vs-State check**

The Department's address file compared against its own polygons.

**Provenance**

Source, custodian, effective date, CRS and snapshot hash on every finding.

**Both directions**

Findings against the County reported with the same rigor. The County decides what is submitted.

**Zero custody**

Taxpayer data processed in County-controlled sessions; § 67-1-1709 acknowledged per person.

**Cadence and calibration**

Quarterly re-measurement; annual precision/recall report against actual coding.

**Demonstration before award**

A working public-data demonstration for Wilson and two adjoining counties.

*Pricing in the solicitation: a fixed annual program fee per resident on the Census estimate, per-unit work product, no contingency on monitoring. Three-year term, two renewals.*

# What We Are Asking For

1

## The roll, the list, and the report

The Assessor's TPP account roll and the Clerk's active licence list (Friday's ask) — plus one pull of the situs report from the Department's REP portal by Finance. It never leaves your browser, and it turns 537 ranked businesses into a named, verified correction list at no cost and no commitment.

2

## Thirty minutes with the Assessor

Stephen Goodall's office owns the assessment decision and the appeal workload; they should hear the dispute-absorption design directly. Finance owns the situs letters; the same half hour covers both.

3

## Agreement in principle on the program

Three revenue lines, one placed universe, one annual fee per resident, work product as produced, every determination left with the County — and a solicitation the County can put on the street this quarter.
