

From a Lead Price to a Program Price

\$24,000 a year bought one screening for one office. The program is three revenue lines for three offices, monitored continuously, priced in three simple units — and the County keeps 100% of every dollar.

WHERE WE STARTED

\$24,000 / yr

\$10 per lead, TPP and license only, one office, one pass. Anticipated recovery ≈ \$650,000.

THE PROGRAM

\$0.60 / resident / yr

Situs monitoring, quarterly: 175,033 residents × \$0.60 = \$105,020. Plus work product as produced: \$250 per adjudicated situs packet; \$10 per double-verified TPP / license lead, 2,400 a year minimum — Friday's \$24,000 becomes the floor.

	Year 1	Year 2+
Situs monitoring (\$0.60 × 175,033 residents)	\$105,020	\$105,020
Situs packets at \$250 (~150, then ~25/yr)	\$37,500	\$6,250
Double-verified TPP + license leads (2,400/yr minimum)	\$24,000	\$24,000
County pays	≈ \$166,500	≈ \$135,300
County recovers / protects	\$3.1M – \$5.8M	\$1.1M – \$2.3M
Return on the fee	18× – 35×	8× – 17×

Continuous, not once

+1,724 new entities a year and a one-year DOR window: a single pass leaves money on the table every quarter.

Flat fee is the law on TPP

§ 67-5-507(c) voids percentage-of-recovery for assessment work; the fee has to carry the work. It still beats any contingency.

What contingency would cost

HdL 15%, Neumo 30%, Azavar up to 50%: on the situs stream alone that is \$93K–\$925K a year, taken off the top, forever.

Three units, one rate card, every county and city in Tennessee: \$0.60 per resident for situs (\$0.30 municipal) · \$250 per situs packet · \$10 per double-verified lead (\$5 municipal). Multi-year term, no contingency, ever.
